PROBLEM TO BE SOLVED: To provide an own-hair-utilized type wig free from any peripheral rim frame member representing the wig outline, thereby capable of easily drawing a plenty of own hair and utilizing the own hair through intimately mixing the imitation hair together, thus effecting rich hair as a whole.

SOLUTION: This own-hair-utilized type wig designed to draw the own hair of a wearer through the space of the wig and mix the own hair with the imitation hair 15 attached to the wig has such a scheme that a plurality of ribs 13 are combined together so as not to form the outline of the wig, thereby forming a skeleton-like framework, to which a plenty of the imitation hair 15 are fixed to construct a hair-implanted frame 10 free from any peripheral rim frame. Owing to the above scheme, this wig can be worn by mixing the own hair of a wearer drawn through the space of the hair-implanted frame 10 with the imitation hair 15 fixed to the ribs 13.
